

# AEROSHOES® INSOLES with Epithelium 26®

**BACKGROUND:**

**These insoles can easily become locations for bacterial and fungal growth (mycoses) since these organisms like hot and humid environments. So it is important to select a base material that limits microbial development.**

**INDICATIONS:**

- Pressure on the ball of the foot
- Pain on the ball of the foot, calluses, etc.
- Rhumatism, algodystrophy, Morton disease
- Prolonged standing, wearing high heels
- Intense activity or sport involving the forefoot

**PROPERTIES:**

- These insoles include a module of Epithelium 26® in the plantar area to distribute pressure.
- The fabric selected for Aeroshoes® shows remarkable properties of absorption and desorption of liquids, preventing the feeling of dampness in shoes.

**RECOMMENDATIONS FOR USE:**

- These insoles are worn directly against the skin in the shoes.
- The printed part of the material must be in contact with the sole of the foot.
- Can be machine-washed at 40°.
- Average duration of use: several months
