

PLANTAR TIP PROTECTIONS

With Epithelium 26®

BACKGROUND:

What is the footpad?

The foot has a natural weight distributor called the “plantar ball”. This sub-cutaneous tissue is 1 cm thick and made up of many fatty vesicles that deform under pressure. Unfortunately, with age there is often an irreversible change in the plantar ball which causes intense pain at the front of the foot, as well as the formation of calluses.

INDICATIONS:

- Pressure on the ball of the foot
- Pain on the ball of the foot, calluses, etc.
- Rheumatism, algodystrophy, Morton disease
- Prolonged standing, wearing high heels
- Intense activity or sport involving the forefoot

PROPERTIES:

- The Epithelium 26® module located in the ball-of-foot area acts as a load distributor in painful pressure points.
- Prefer these plantar tip protections to the Plantar Cushions if your skin is very sensitive.
- The fabric was selected for its ability to evacuate perspiration in addition to its softness, making this protection very pleasant to wear.
- Fit men and women. They are discreet in the shoes.
- They can be used for several months on average.

RECOMMENDATIONS FOR USE:

- Wear directly against the skin. Wear socks, tights or stockings over the device for optimal comfort.
- Machine-washable at 40°C in the washing bag or by hand wash.
- Average duration of use: several months.

Comes with washing bag
