

SEPARATORS with EPITHELIUM™

To relieve the pain from corns, pressure on the skin must be decreased. And this is the effect of Epithelium™, a weight distributor.

INDICATIONS:

- Interdigital/soft corns
- Protection of corns located at the base the interdigital space after treatment

PROPERTIES:

- By separating the toes by several millimeters, separators prevent and relieve **soft corns located at the base of interdigital spaces**.
- Epithelium™ is a supple gel that adapts itself perfectly to the contour of the foot for immediate comfort. With its shape and adhesiveness, the separator remains in place throughout the day.
- The separators contain an antimicrobial compound that prevents fungal development.

RECOMMENDATIONS FOR USE:

- Can be washed by hand, so it can be reused.
- Duration of use: 1 month

References	Size	Unit
0818	Small	Pack of 12 separators
0819	Large	Pack of 8 separators

Consumer Products (with Sales Packaging)

0815	Small	Pack of 6 separators
0816	Large	Pack of 4 separators

Skin contact compatibility:

All of our silicon gels are materials that comply with ISO standard 10993-10. They are all compatible with skin contact. No irritation, allergenic effect or cytotoxicity is observed. However, we recommend cleaning the material if applying on damaged skin. Using Epithelium in direct contact with a wound is counter-indicated. However, it can be applied by carefully inserting gauze between the wound and the Epithelium.
